Energy Procurement Navigate energy markets with confidence

Virtual Environmental Manager Leverage our teams wide experience

Certificates Close Certificates Open Certificates

Certificates Our Environmental Attribute Certificate services help businesses accelerate technology adoption, improve project ROI, and manage claims of renewable energy, energy efficiency and carbon offset

1 carbon offset = 1 tonne of CO₂-e avoided or removed from the atmosphere.

Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation.

Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage.

Are you ready to publish your mandatory Climate Change Mitigation and Adaptation Plan (CCMAP) for NSW sites with Environment Protection Licences? Angela Clarke May 25, 2026 Articles Share this article Key points The first CCMAP is due 31 March 2027 for Safeguard Mechanism sites and coal mines, and 31 August 2027 for all other sites. A 5 year emissions mitigation plan needs to be published on your website and needs forward planning now. The Requirements The new regulation requires holders of NSW Environment Protection Licences (EPLs) to publish three things for any site that has exceeded 25kt CO₂e of scope 1 and 2 emissions in the last 3 years: An annual emissions report — the most recent NGER National Greenhouse and Energy Reporting Scheme. Large energy users and greenhouse gas emitters that exceed the thresholds must report their detailed energy and emissions data each year to the Australian Clean Energy Regulator. More report, plus scope 1 livestock and land use emissions for agricultural sites. First report due 31 March 2027. A 5 year forward estimate of scope 1 and 2 emissions that reflects planned production changes and reduction measures. Due 31 March 2027, updated every 3 years. A Climate Change Mitigation and Adaptation Plan (CCMAP) — note the regulation does not yet cover adaptation. The plan sets the goals for the site scope 1 and 2 emissions and outlines how it will meet them. The EPA expects goals to be broadly consistent with NSW's targets: a 50% reduction on 2005 levels by 2030, 70% by 2035, and net zero by 2050. The plan must also list the mitigation measures the site will implement over the next 5 years, with timeframes and the contribution each makes to the emissions goals. Updates every 3 years. Further reading Climate change requirements for licensees | EPA How can Northmore Gordon help? Public emissions commitments need confidence in your forecasts and in the savings each project will deliver. We build that confidence through emissions forecasting . For site managers, the cheapest path to lower emissions usually combines well-chosen projects with grants

and environmental certificate revenue. Identifying and sizing those projects, and securing external funding, is our strong point. As an accredited certificate provider, we also handle the certificate creation work for you. Setting credible emissions goals means understanding current and emerging technologies, the energy transition, and the energy and certificate markets. We can guide you through these and build your team's knowledge as we go. If you already have a plan, we can strengthen it with feasibility studies and funding support. If you don't, we can help you build one. Talk to Angela Clarke today and learn more about mandatory reporting.
