For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERs Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy

Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation. Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage. certificates Live Certificate Prices The value of certificates change day-to-day, check today's prices Solar VEECs (VEU PBA) VEU PBA for Large-scale Solar Measurement & Verification (VEU & ESS) M&V; for Large C&I; Efficiency Projects (VEU PBA & ESS PIAM&V;) BESS Calculator Estimate the Peak Reduction Certificate revenue available to your NSW battery project in minutes ERF & Carbon Credit Registration ACCUs for Emission Reduction Projects Boiler Upgrades (VEU & ESS) NSW & VIC Boiler Rebates REC Registration (I-RECs & LGCs) Register renewable assets for I-RECs and LGCs Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Certificates and Offsets Deemed Certificates (VEU & ESS) NSW & VIC Rebates Global Certificates Environmental Attribute Certificates Australian Programs Australian EAC Programs Case Studies Sectors Articles Team More Close More Open More Northmore Gordon Learn more about Northmore Gordon with the latest news and insights, were to find us, and the extensive terminology used in emissions reductions About Us Who we are & what we do in energy efficiency & decarbonization. Glossary Define key terms in emissions reduction. Industrial metering and data systems should be Technology-Agnostic and Performance-Driven Phil Woodward February 26, 2026 Articles Share this article Carbon, energy and environmental reporting obligations are increasing rapidly, with accountability now extending to executive leadership and Boards. At the same time, many organisations are investing heavily in ESG and sustainability reporting platforms to meet global compliance requirements. But reporting platforms are only as good as the data that feeds them. Manual processes, estimated data and poorly integrated metering systems create risk, inefficiency and lost value. Northmore Gordon provides independent energy and carbon data architecture, ensuring your hardware, software and reporting platforms work together to deliver reliable, automated, audit-ready data. The Market Challenge There are three common provider models in the market: • End-to-End EMIS Providers Offer hardware, software and analytics in one proprietary stack. • Meter + Platform Bundlers Provide their preferred brand of meter tied to their preferred reporting solution. • Reporting Platform Providers Deliver powerful ESG and compliance tools but rely entirely on the quality of client-supplied data. All are product-led. None are independent or best-fit for you. The Northmore Gordon Difference Northmore Gordon sits above the technology. We are not tied to any single metering supplier, software vendor or reporting platform. We independently design and deliver the right combination of: • Sub-metering infrastructure • Automated data collection systems • Integration software • ESG and reporting platforms • Measurement & Verification (M&V;) frameworks This ensures you receive the most cost-effective, scalable and future-ready solution, not a vendor-driven stack. Turning Compliance Investment into Performance Value Many organisations are making significant investments in ESG and sustainability reporting systems to meet global obligations. We ensure those investments deliver maximum value by: • Designing the right sub-metering architecture • Automating and validating data collection • Integrating seamlessly with enterprise reporting platforms • Establishing audit-ready data streams • Enabling verification of savings and performance improvements • Supporting multi-site rollout and replication Our approach transforms compliance infrastructure into a strategic operational asset. Beyond Reporting – Driving Operational Insight A properly architected data

ecosystem enables organisations to:

- Track energy performance indicators (EnPIs)
- Monitor energy cost per unit of production
- Allocate energy costs by department or process
- Verify savings from efficiency and decarbonisation projects
- Identify operational inefficiencies in near real time
- Improve budgeting and forecasting accuracy

This is how you move from reporting to measurable operational improvement. Sector Expertise + Execution Capability Northmore Gordon combines:

- Deep knowledge of industrial sectors
- Strong project management capability
- Independent technical expertise

Repeatable multi-site rollout frameworks We design once and execute consistently across every site. This reduces risk, accelerates deployment and ensures consistent, defensible data across your portfolio. Measure · Monitor · Manage Our framework ensures:

- Accurate Measurement – Independent design and installation of right-sized sub-metering systems.
- Clear Monitoring – Automated, integrated data collection aligned to reporting and operational needs.
- Ability to Manage – Actionable insights that support compliance, governance and continuous improvement.

All delivered with a focus on helping organisations do more with less, less manual effort, less vendor lock-in, less reporting risk. Northmore Gordon Your Independent Data Partner for Energy and Carbon We provide:

- Independent metering strategy
- Measurement & Verification (M&V;)
- Data architecture and integration with existing systems
- ESG platform enablement
- Operational efficiency

Talk to us about building a defensible, scalable data foundation that supports compliance, performance and long-term sustainability outcomes
