For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERs Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy Sourcing Feasibility & Assessments: Renewables, PPAs or Certificates Compressed Air Services Air Compressor Leak Audits, Surveys and Benchmarking EEO Assessments (SG) Singapore Energy Efficiency Assessments Energy Procurement Navigate energy markets with confidence Virtual Environmental Manager Leverage our teams wide experience Certificates Close Certificates Open Certificates Certificates Our Environmental Attribute Certificate services help

businesses accelerate technology adoption, improve project ROI, and manage claims of renewable energy, energy efficiency and carbon offset 1 carbon offset = 1 tonne of CO₂-e avoided or removed from the atmosphere. Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation. Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage.

Northmore Gordon Learn more about Northmore Gordon with the latest news and insights, were to find us, and the extensive terminology used in emissions reductions About Us Who we are & what we do in energy efficiency & decarbonization. Locations Find our offices near you. Contact Us Get in touch with our team. Careers Join our team making a sustainability difference Articles Learn about energy efficiency & carbon reduction. Latest News Stay informed on industry developments. Government Updates Track policy changes impacting your energy use. Accreditations See our certifications for trusted service. Glossary Define key terms in emissions reduction. Our Journey 2009-2025. Craig Morgan December 23, 2025 Articles Share this article Since 2009, Northmore Gordon has been at the forefront of environmental certificates and strategic energy consulting in Australia. Our journey through the VEU Program has been marked by industry leadership, technical innovation and strategic foresight. Here's how we got here: Each step has reinforced our position as the most trusted partner for energy project certification in Australia. Who benefits most? • Installers & EPCs – Increase competitiveness and improve project viability. • Developers & PPA Power Purchase Agreement is a direct agreement between a renewable energy project developer and an end-user for the sale of renewable electricity. Behind the meter, PPAs are commonly used for on-site solar. Off-site PPAs supply renewable energy from projects that are connected to the same electricity grid as the end-user, but can be located anywhere. Providers – Boost project IRR with additional revenue. • Asset Owners & Facility Managers – Strengthen investment cases with upfront cashflow. • Retailers & Aggregators – Monetise solar demand via certificate creation. All Solar VEEC Victorian Energy Efficiency Certificate Pathways Now Available As we head into 2026, Northmore Gordon is uniquely positioned to offer support across all solar system sizes: • 30–200 kW – Activity 47 (Deemed VEECs) • 200–400 kW – Streamlined M&V; (SMM4) • 400 kW+ – Project-Based Activities with full M&V; We guide clients through eligibility, modelling, compliance and monetisation. How Northmore Gordon supports you • Eligibility Assessments for Activity 47 • Pre-registration with the ESC An energy savings certificate (ESC) is a tradeable certificate created under Division 7 of Part 9 of the Electricity Supply Act 1995. Each ESC represents one notional megawatt hour (MWh) of energy. (mandatory before installation) • Baseline modelling and evidence validation • Certificate creation, sale and payment coordination • Compliance assurance through regulator-approved methods We also support project stacking with LGCs and STCs Small-scale Technology Certificate under the Australian Renewable Energy Target. More and other rebates where applicable. A Track Record of Results From pioneering Solar VEECs to becoming the first accredited person under Activity 47, Northmore Gordon has consistently led the market, delivering measurable outcomes including: • 44% of all VEECs created under M&V; • More than \$200m returned to clients through certificate value • Over 10+ years of regulatory expertise, supported by direct engagement across state and federal programs • 1st to enable Activity 47 on the ground, translating policy into action. Tools to get you started Use our free Solar VEEC Calculator to estimate: • Potential VEEC value • Payback improvement • Comparison across VEEC, STC and LGC Large-scale Generation Certificate under the Australian Renewable Energy Target.
