For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERs Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy

Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation. Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage. certificates Live Certificate Prices The value of certificates change day-to-day, check today's prices Solar VEECs (VEU PBA) VEU PBA for Large-scale Solar Measurement & Verification (VEU & ESS) M&V; for Large C&I; Efficiency Projects (VEU PBA & ESS PIAM&V;) BESS Calculator Estimate the Peak Reduction Certificate revenue available to your NSW battery project in minutes ERF & Carbon Credit Registration ACCUs for Emission Reduction Projects Boiler Upgrades (VEU & ESS) NSW & VIC Boiler Rebates REC Registration (I-RECs & LGCs) Register renewable assets for I-RECs and LGCs Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Certificates and Offsets Deemed Certificates (VEU & ESS) NSW & VIC Rebates Global Certificates Environmental Attribute Certificates Australian Programs Australian EAC Programs Case Studies Sectors Articles Team More Close More Open More Northmore Gordon Learn more about Northmore Gordon with the latest news and insights, were to find us, and the extensive terminology used in emissions reductions About Us Who we are & what we do in energy efficiency & decarbonization. Glossary Define key terms in emissions reduction. Strategic Partnership with Pangolin Associates: Turning ASRS Compliance into Competitive Advantage Northmore Gordon August 15, 2025 Articles Share this article From January 2025, the new Australian Sustainability Reporting Standards (ASRS Australian Sustainability Reporting Standards (ASRS) - Australia's mandatory climate-related financial reporting rules started on 1 January 2025 and are being phased in across three reporting groups.) requires large energy users to disclose detailed climate-related information. For many organisations, this represents more than a compliance challenge – it's a strategic opportunity. That's why Northmore Gordon has partnered with Pangolin Associates to deliver an end-to-end ASRS compliance solution that goes beyond meeting the standard. Together, we help you do more with less – less regulatory risk, less wasted energy, and less missed opportunity. Why ASRS is more than a reporting requirement For Group 1 entities – Australia's largest companies and energy users – the first ASRS reports are due in 2026, based on the 2025 reporting year. These reports must go far beyond carbon accounting, requiring: • Comprehensive emissions measurement (Scope 1, 2 and relevant Scope 3) • Climate risk assessment and scenario analysis • Transition planning with clear targets and timelines • Financial disclosures linked to climate impacts For organisations without a strategic plan, the process can be resource-intensive and fraught with risk. But done right, ASRS preparation can unlock operational efficiencies, identify funding pathways, and improve investor confidence. The Northmore Gordon + Pangolin Advantage Our partnership combines: • Northmore Gordon's strengths in energy optimisation, engineering-level feasibility, and grant & certificate funding (VEEC Victorian Energy Efficiency Certificate , LGC Large-scale Generation Certificate under the Australian Renewable Energy Target. More , ACCU An ACCU is a unit issued to a person by the Clean Energy Regulator (Regulator) by making an entry for the unit in an account kept by the person in the electronic [Australian National Registry of Emissions Units] registry. Each ACCU issued represents one tonne of carbon dioxide equivalent (tCO₂-e) stored or avoided by a project. An ACCU can only be issued to a person if the person has a Registry account. , and more) • Pangolin Associates' expertise in climate risk assessment, net zero planning, and sustainability reporting frameworks By integrating these

capabilities, we offer a single, streamlined service from data gathering through to board-ready ASRS disclosure. How we help large energy users do more with less • Less risk – Strategic regulatory mastery ensures ASRS reports meet evolving standards and avoid compliance penalties • Less cost – Energy and certificate optimisation reduce operating expenses and unlock additional revenue streams • Less complexity – One coordinated team handling both energy performance and climate disclosure requirements • Less wasted opportunity – Aligning compliance with your broader net zero and ROI goals

Our end-to-end ASRS service includes:

- Baseline emissions measurement across Scope 1, 2 and relevant Scope 3 categories
- Climate risk assessment aligned with TCFD

The Task Force on Climate-related Financial Disclosures (TCFD) is an industry-led effort, chaired by Michael Bloomberg, with 32 global expert members from the private sector. The TCFD recommendations are designed to solicit consistent, decision-useful, forward-looking information on the material financial impacts of climate-related risks and opportunities, including those related to the global transition to a lower-carbon economy. More and ASRS requirements • Scenario modelling for physical and transition climate risks • Transition planning and identification of decarbonisation projects • Certificate and funding strategies to offset capital costs • Final reporting for inclusion in annual sustainability and financial reports

Why act now Early preparation means more time to integrate compliance with business strategy. Waiting until the last minute risks missed funding windows, higher costs, and rushed reporting. As Hamish McGovern, Managing Director at Northmore Gordon, explains: “This partnership ensures clients not only meet ASRS requirements but also uncover valuable opportunities to reduce costs, cut emissions, and secure funding for their energy transition.”

Iain Smale, Managing Director at Pangolin Associates, adds: “Together, we provide the climate risk assessment and energy solutions needed for compliance and long-term sustainability.”

First ASRS reports for Group 1 entities are due in 2026. Let's make sure yours is more than just compliant – it's strategic.
