For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERS Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy Sourcing Feasibility & Assessments: Renewables, PPAs or Certificates Compressed Air Services Air Compressor Leak Audits, Surveys and Benchmarking EEO Assessments (SG) Singapore Energy Efficiency Assessments Energy Procurement Navigate energy markets with confidence Virtual Environmental Manager Leverage our teams wide experience Certificates Close Certificates Open

Certificates Our Environmental Attribute Certificate services help businesses accelerate technology adoption, improve project ROI, and manage claims of renewable energy, energy efficiency and carbon offset 1 carbon offset = 1 tonne of CO₂-e avoided or removed from the atmosphere. Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation. Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage.

Glossary Define key terms in emissions reduction. 5G Networks optimise the country with Energy Upgrades Case Studies May 13, 2025 Northmore Gordon "Northmore Gordon worked closely with us over eight months to achieve funding from the VEU Victorian Energy Upgrades is a Victorian government energy efficiency program that gives every Victorian household and business the opportunity to receive rebates or discounts on energy saving products. Program. They ensured the complex requirements of the program were met with full compliance and in accord with the satisfaction of the regulator; importantly this also maximised the certificate value on a VEEC Victorian Energy Efficiency Certificate volatile market." – Michael Roberts, National DC Facilities Manager The Client 5G Networks is a licensed telecommunications carrier operating across Australia. Our mission is to be the partner of choice for unifying a seamless digital experience for our customers across data connectivity, cloud and data centre services, all underpinned by our expert managed services. 5GN Networks owns and operates data centres in a number of locations including Sydney, North Sydney and Melbourne where they securely host customer servers and data. Our Role Northmore Gordon worked through all the complexities of the Victorian Energy Upgrade Program to maximise the financial incentives. Northmore Gordon worked tirelessly to ensure all the regulators requirements and queries were satisfied. This included created the measurement & verification (M&V;) plan, collected site data and supporting evidence, and built the baseline and operating energy models to calculate the energy savings Electricity or gas savings or both. . Northmore Gordon also provided us with price certainty to ensure the customer received the payment they had forecast. Challenges Competitive pressures to provide high quality service whilst minimising underlying costs Energy bills represent a substantial cost to data centre operators Aging equipment could impact reliability Key Facts Certificate Value: ~\$85,000, Payback: ~ 4 Years Equipment Upgraded: UPS, BMS Building management system, used to control the operation of the energy using equipment in the building. , Aisle Partitioning Annual Savings: Energy: 310 MWh, Carbon Abatement: 335 tCO₂e OPEX: ~\$50,000 Project Value: CAPEX: ~ \$300,000 Program: Victorian Energy Upgrades (VEU) Method: Project Based Activities (PBA Project Based Activities) Additional Benefits Better equipment UPS reliability Better computer equipment operating conditions Faulty and inefficient auxillary equipment (pumps) identified during the measurement and verification approach The Project To stay competitive in the market 5G Networks concluded that energy efficiency upgrades were required at their recently acquired Melbourne Data Centre. The upgrades included the installation of two new high efficiency Uninterrupted Power Supply (UPS), a new Building

Management System (BMS), and temperature set point and chiller optimisation. In addition, a hot aisle / cold aisle approach was implemented to optimise airflow and cooling of the equipment.
