For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERS Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy Sourcing Feasibility & Assessments: Renewables, PPAs or Certificates Compressed Air Services Air Compressor Leak Audits, Surveys and Benchmarking EEO Assessments (SG) Singapore Energy Efficiency Assessments Energy Procurement Navigate energy markets with confidence Virtual Environmental Manager Leverage our teams wide experience Certificates Close Certificates Open

Certificates Our Environmental Attribute Certificate services help businesses accelerate technology adoption, improve project ROI, and manage claims of renewable energy, energy efficiency and carbon offset 1 carbon offset = 1 tonne of CO₂-e avoided or removed from the atmosphere. Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation. Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage.

Glossary Define key terms in emissions reduction. Airline Parts Manufacturer Lands Great Opportunities Case Studies May 24, 2023 Northmore Gordon Northmore Gordon worked closely with a Singapore- based parts manufacturer over 2021 to complete an Energy Efficiency Opportunities Assessment as required by Singapore's National Environment Agency (NEA). The complex requirements of the Program were fully met and the report submitted on time. In addition, NG identified practical energy saving opportunities that are now being implemented. The Client The Client has been established in Singapore for many years, with several large manufacturing operations. The operation involves high-precision parts machining, custom treatment, finishing, and final inspection. It is supported by utilities including compressed air, air conditioning and large chiller systems, centralised lubrication systems, and cooling towers. The Project To meet the requirements of the Energy Conservation Act, Singapore sites that use over 54 TJ per annum must undertake an Energy Efficiency Opportunity Assessment. The upgrades recommended included compressed air efficiency, shutting off unnecessary operation of equipment, and more efficient cooling for the machine-centre oil cooling system. Key Facts EEOA-RC completed in line with regulation Annual Savings Estimates Energy: 1,900 MWh Carbon Abatement: 780 tCO₂e OPEX: ~\$180,000 Project Details CAPEX: ~\$460,000 Payback: ~2.5 years Challenges Competitive pressures to provide high quality service whilst minimising operating costs Energy bills represent a substantial cost the operations There are global targets for energy and water efficiency Ageing equipment and production pressures mean savings measures cannot impact reliability Additional Benefits More stable air pressure is expected More stable operating temperatures Lower maintenance costs on pumps through reduced running hours. Our Role Northmore Gordon worked very hard to complete the work to the standard required by the NEA in the timeframe. This included working through the difficulties of restrictions that occurred in 2020 due to Covid lockdowns. The work included installing temporary metering, reading of on-site meters, development of a detailed energy balance, analysis of the data, identification of energy efficiency opportunities in conjunction with the Client, completion of the NEA's report template, and achieving sign-off by the Client stakeholders. A long-established Singaporean manufacturer producing high-quality precision components in clean-room environments for specialised industrial and commercial applications.
