For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERS Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy Sourcing Feasibility & Assessments: Renewables, PPAs or Certificates Compressed Air Services Air Compressor Leak Audits, Surveys and Benchmarking EEO Assessments (SG) Singapore Energy Efficiency Assessments Energy Procurement Navigate energy markets with confidence Virtual Environmental Manager Leverage our teams wide experience Certificates Close Certificates Open

Certificates Our Environmental Attribute Certificate services help businesses accelerate technology adoption, improve project ROI, and manage claims of renewable energy, energy efficiency and carbon offset 1 carbon offset = 1 tonne of CO₂-e avoided or removed from the atmosphere. Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions such as energy efficiency improvements or avoided deforestation. Removal covers activities that permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon improvement or carbon capture and storage.

Glossary Define key terms in emissions reduction. Molycop Strives for Greater Sustainability Case Studies May 13, 2025 Northmore Gordon About Molycop Molycop is the largest and most experienced manufacturer and supplier of grinding media to mining operations worldwide. Molycop is striving for greater sustainability through superior resource efficiency and defining a new standard of environmental performance. How we helped Since 2006, the Northmore Gordon Newcastle team has helped Molycop achieve annual energy cost savings and maximise their return on investment in energy projects through: Energy management strategy Energy audits Project development support Grants and funding options Energy and carbon reporting Energy and carbon certificates The Challenge Molycop is the largest and most experienced manufacturer and supplier of grinding media to mining operations worldwide. Whilst energy has always been important, and compliance with regulation critical, the Waratah site has since expanded its focus to form a long-term goal of decarbonisation through an end-to-end energy strategy. With over 20 years of experience and extensive knowledge in the steel sector, Northmore Gordon was selected to help Molycop develop their comprehensive portfolio of energy projects. Northmore Gordon consultants worked closely with the client's energy and operations teams to investigate their processes and identify opportunities for improving efficiency. More recently, Northmore Gordon's Energy and Carbon experts have been assisting Molycop to plan towards a low carbon emissions steel-making process. The Process Northmore Gordon adopted a systematic approach to identifying and prioritising energy and carbon management opportunities. This included investigating capital projects, low cost process improvements, government funding and revenue from energy and carbon certificates. Our Energy and Carbon Consultants helped Molycop access over one million dollars worth of revenue through the NSW government's Energy Saving Scheme and capital grants. Northmore Gordon also assisted Molycop in their purchasing of renewable energy through a corporate Power Purchase Agreement. Some projects that have been implemented include: Installing Variable Speed Drives on large fans and pumps, including high voltage motors Modifying controls on fume extraction and cooling systems Improving yield Improving furnace controls Reducing pilot flame gas consumption Upgrade bag house Improving furnace heat recovery system Installing heat recovery on ladle preheating equipment Cooling tower upgrades Outcome Through Northmore Gordon's multi-disciplinary approach, Molycop's energy savings Electricity or gas savings or both. has grown to over \$1.5M per annum. The consequential reduction in Greenhouse gas emissions has resulted in 15K tonnes of corresponding carbon emissions abatement each year. This has resulted in over \$12M in

energy costs and certificate revenue over the course of the project. Do you need help developing a decarbonisation strategy? Contact: c.morgan@northmoregordon.com A global leader in grinding media, mining chemicals, and rail consumables, supporting the mining and resources sector with innovative, sustainable solutions.
