For governments a net-zero target is one that covers all scope 1 emissions in their jurisdiction. For business it usually covers scope 1 and 2 emissions, although some companies also include some scope 3 emissions. The Science Based Targets Initiative is currently working on a standard for companies. roadmaps, to reduce emissions moREnewable100 (RECs & Offsets) Reach Global Sustainability Goals with Renewable Energy Certificates and Carbon Offsets Trade RECs & Carbon with us Trade Local & International Environmental Attribute Certificates Climate Active Achieve Climate Active Carbon Neutral Certification Net Zero Roadmaps Identify opportunities and build achievable pathways Carbon and Energy Strategy Integrate your carbon and energy strategies NGERs Reporting National Greenhouse Emissions Reporting Grants and Programs Review the latest grants and programs Energy Close Energy Open Energy Energy We offers comprehensive energy services, focusing on efficiency improvements, cost reduction, monitoring, benchmarking and strategic sourcing for sustainable and positive environmental impacts Grants and Program Review the latest grants and programs Energy Audit & Assessments Identify cost and emissions reductions Energy Optimisation Metering & Monitoring, Feasibility Studies, EnMS and ISO50001, & Benchmarking Strategic Energy Sourcing Feasibility & Assessments: Renewables, PPAs or Certificates Compressed Air Services Air Compressor Leak Audits, Surveys and Benchmarking EEO Assessments (SG) Singapore Energy Efficiency Assessments Energy Procurement Navigate energy markets with confidence Virtual

 Certificates Certificates Our Environmental Attribute Certificate services help businesses accelerate
 technology adoption, improve project ROI, and manage claims of renewable energy, energy efficiency
 and carbon offset 1 carbon offset = 1 tonne of CO₂-e avoided or removed from the atmosphere.
 Avoided emissions covers activities that alter behaviour that would have otherwise caused emissions
 such as energy efficiency improvements or avoided deforestation. Removal covers activities that
 permanently remove CO₂ from the atmosphere such as new forestry plantations, soil carbon
 improvement or carbon capture and storage. certificates Live Certificate Prices The value of certificates

 Define key terms in emissions reduction. A record 1,000 projects now participating under the ERF
 Northmore Gordon September 1, 2021 News Share this article A major milestone has been reached in
 Australia's path towards a cleaner and greener future, with the Clean Energy Regulator The Clean
 Energy Regulator is the Australia Government body responsible for accelerating carbon abatement for
 Australia through the administration of the National Greenhouse and Energy Reporting scheme,
 Renewable Energy Target and the Emissions Reduction Fund. More registering its 1000 th project
 under the Emissions Reduction Fund. A soil carbon project on a sheep and cropping farm in Gollan,
 NSW – just outside of Dubbo – was registered in August and marked the milestone under the growing
 scheme. Soil projects have accounted for a quarter of all new registrations under the Emissions
 Reduction Fund (ERF The Emissions Reduction Fund is a voluntary scheme that aims to provide
 incentives for a range of organisations and individuals to adopt new practices and technologies to
 reduce their emissions.) in 2021. Whilst the program has been dominated by the agricultural sector,
 there is an increasing growth in the number of projects for industry. Our experience in ERF is widely
 driven by energy efficiency and alternate waste treatment activities – including a range of fuel
 switching, industrial equipment upgrades and anaerobic digestion. A voluntary program, the Emissions
 Reduction Fund (ERF) is managed by the Clean Energy Regulator and seeks to provide incentives for
 organisations and individuals to adopt new practices and technologies to reduce their greenhouse gas
 emissions. Projects earn Australian carbon credit A certificate that is equivalent to 1 tonne CO₂-e.
 Credits often refer to instruments issued under a cap and trade scheme, where companies are
 allocated credits up to their emission cap. If they exceed the cap they need to purchase more credits.
 units (ACCUs) that can be sold to generate income, either to the Government through a carbon
 abatement contract, or to private buyers in the private market. The average sale price across all
 government auctions is \$12.32 per tonne. The ERF's most recent report showed that the scheme had
 so far delivered 98.89 million tonnes in cumulative emissions reductions to July 31, 2021. The 100
 million tonnes barrier is expected to be broken in coming months, with the Regulator expecting the ERF
 to credit 17 million tonnes of emissions reductions during 2021. Minister for Energy and Emissions
 Reduction Angus Taylor said the Emissions Reduction Fund is at the heart of the Government's
 technology-led plan to drive down emissions. "As one of the world's most rigorous carbon offset
 programs, the Emissions Reduction Fund is driving genuine actions to help Australia meet and beat our

climate goals” Minister Taylor said. The Clean Energy Regulator has set targets to halve the development time of new ERF methods to less than 12 months.
